+1 520 609 9095

## Education

The Design School at
Arizona State University,
Tempe, AZ, US — August 2009–May 2013
  Bachelor of Science in Industrial Design

## Employment

Wandering Designer
  *with* Samara, Urbit, Other Internet,
  Open Space Observatory, and others.
2018–Ongoing
  Research and Development,
  Product/Infrastructure Design
Tumblr
December 2015–March 2018
  Senior Digital Product Designer,
  Tumblr Labs Council-person
IBM
April 2013–December 2015
  Digital Product Designer (UX-focus), Prototyper,
  Co-founder of IBM Community Radio
Freelance Works
2010–2013
  Industrial Design, Branding, Research
Henkel Consumer Products
December 2012–May 2013
  Industrial Designer, Design Research

## Teaching

Parsons School of Design
Spring 2017, Core Studio Interaction Design
  Part-time Faculty
IBM Design
2014–2015
  Prototyping Workshop Lead, Facilitator

## Associated Projects

New Computer Working Group
2017–Ongoing
  Writing, Workshopping, Prototyping

Learning Gardens
2016–Ongoing
  Co-founder, Facilitator

## Workshops, Lectures, Exhibitions

“Being a Body”
February 2018, METRO Library Council
  *with* Callil Capuozzo and Sarah Hamerman

## Software & Work Knowledge

Software Drawing:
  Figma, Sketch, Adobe 2D products, etc.
Software Prototyping:
  I prefer Framer but have used/tried it all
Version Control:
  Git and Abstract
Up-to-date with rapidly evolving
frontend development tooling:
  Prototyping capability via HTML/CSS/JS
  Learning React ecosystem(s)

User Research:
  Familiar with various methods of quantitative
  and qualitative data gathering,
  research tools (improvised and otherwise), and
  user communication/interview best practices

Proficient at communicating via drawing,
wireframing, doodling, whiteboarding, etc.

Rapid physical prototyping:
  Wood, foam, plastic, metal: I can shape it all!
Various 3D apps/workflows:
  Rhino, Solidworks, Blender, Cinema 4D
“Industrial Design-related” fundamental knowledge:
  Human ergonomics, basic materials science,
  manufacturing methodologies, etc.

## Additional Context

Something I tweeted a while back that nicely
encapsulates my working thesis for the next 20 years:

> “More often than not, the most meaningful
> human activity boils down to providing support
> structure for one another — in turn, the most
> meaningful *designed output* is *infrastructure*.”

## Things I'm Currently Learning

Clothing construction and pattern-making,
Python (for machine learning and data science reasons)
Mandarin Chinese
ECMAScript/modern Javascript fluency
Fundamental Software (Systems) Architecture
Distributed Systems Design
Formal/institutional pedagogy
How to write long form

N/A

Spatial Index, for FOAM
Early-stage UX, Product Design

The FOAM Spatial Index is a map-based means of viewing 'space' defined in the FOAM ecosystem. Along with General Trademark, I explored several structures the system could have inhabited.

Tumblr 2, for Tumblr
Product Design

One of the larger projects I've been involved with recently has been the complete overhaul and re-development of Tumblr, which has historically been a microblogging platform. Throughout the span of the project, I took on the reconceptualization of many aspects of the overall product, ranging from user authentication and safety to the creation/presentation of atomic bits of content in Tumblr's main feed.

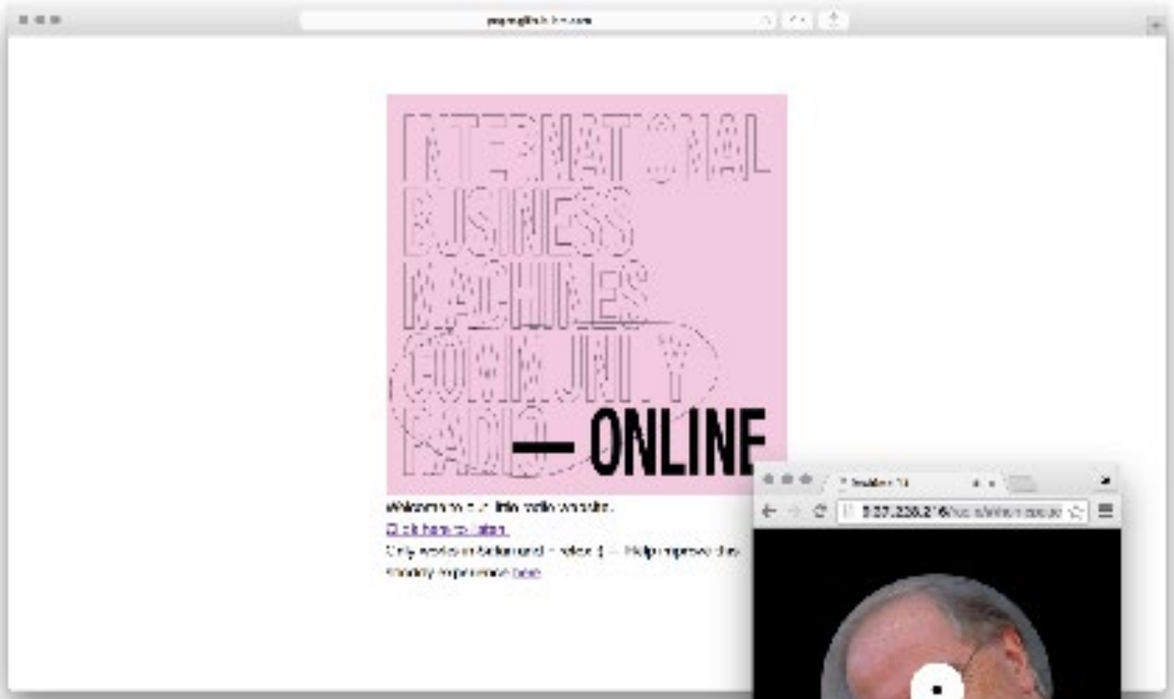

IBM Community Radio
Website, Front-end development, Art Direction, Community Building

IBM Community Radio was a side–project–turned–platform for critical thought, culture renewal, and good music. I prototyped the initial front–end player/schedule interfaces, co-ordinated formative on-air content, and educated folks on how to get up and running quickly on the network. As of November 2016, IBM Community Radio had been cited as reaching "...between 5,000 and 6,000 people [within IBM] daily."

Are.na Unsolicited Works
Wen Design, Product Design

In the manner most associated with open source software development, I've contributed a fair amount of unsolicited design works to the development of Are.na, a platform for freeform research and knowledge-linking.
